CYCLONE LC

AUTOMATED PROGRAMMER, TEST & DEBUG INTERFACE

In-circuit, stand-alone programmer for internal & external flash.

Versatile programming tool built for reliability on the production line. Rich feature set offers terrific value. Supports ARM® Cortex and many 8-/16-/32-bit NXP® architectures.

Simple To Configure & Operate

Stores eight images in internal Cyclone memory. The touchscreen allows easy image selection. A single button press can launch programming.
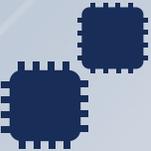

Extensive Device Support

Supports programming of ARM devices from many manufacturers, as well as a variety of NXP 8-/16-/32-bit devices.

Stand-Alone Programming

Once a Cyclone LC programmer is configured it can operate with or without a PC.

Reliable & Feature Rich

Built to last with support for dynamic data (like serial numbers), power switching, JTAG daisy-chain, & 3 communication types. ProCryption Security (RSA image encryption & programming restrictions) may be purchased separately.

Easily Automated

Cyclone Control Suite allows for launch & control of one or more Cyclones. Almost all control/automation features are included standard with Cyclone LC.
